On the Witness of Time and the Appearance of Drift

Because the lights of heaven were set for signs, for seasons, for days, and for years, the order of time is governed above before it is measured below.

Because the sun establishes the year, and the moon marks the days, the counting of time remains perfect in its course, even when the appearance upon a fixed page seems to shift.

Therefore, what appears as a half-day or single-day drift within this study calendar is not error in the structure, but the visible witness of living time interacting with static formatting.

For the heavens do not move according to printed grids, but the grids are drawn to reflect the heavens.

He who observes the order will discern the pattern.

He who clings only to the page will miss the movement.

Thus, let this calendar be used for instruction and alignment,

and let observation confirm what is written.

Next Month Trigger

The **Dec 8 New Moon (3:27 PM)** occurs during the covenant day that began **sundown Dec 8**.

So:

✅ **Month 10 will begin at sundown Dec 9 → daytime Dec 10**

Month-start rule applied: the 🌑 **New Moon is Dec 8 at 7:51 PM** (NY), so Month 10 begins **that covenant day** (sundown Dec 8 → daytime Dec 9).

Next month trigger: the next 🌑 **New Moon is Jan 7 at 3:24 PM** (NY), which sits inside the covenant day that begins **sundown Jan 6**.
 So Month 10 runs **29 days** and Month 11 begins **sundown Jan 6**.

☀️ **Winter Solstice (NY): Dec 21, 3:50 PM** — this lands inside the covenant day that began **sundown Dec 20**, so it stamps **M10D13**.

Month 13 completes.

🌑 YEAR 2 — MONTH 1 BEGINS

Next New Moon: April 6, 2027 (daytime).

That moment sits inside the covenant day that began **sundown April 5**.

So:

Covenant Day	Begins Sundown	Daytime	Solar Layer	Lunar Layer
Y2 / M1D1	**Apr 5**	**Apr 6**	Solar Year 2 — Day 18	🌑 Lunar Month 1 Day 1

Now both tracks are clean.

Solar Year 2 already running.
Lunar Month 1 now begins.
No broken week.
No hidden reset.
No forced April ceiling.

A year stands if at least one anchor hits with full witness.

Anchors:

1. **New-Year Anchor**

   ○ ☀️ Equinox passed

- ○ 🌑 New Moon begins Month 1

2. **Passover Anchor**

   - ○ 🍞 Month 1 Day 14

   - ○ 🌕 Full Moon inside **14–15–16** window

If **both happen strongly in the same cycle → Double Seal Year.**

Now we continue pouring **Year 2 Month 1** from the transition we already established.

📜 SOLAR YEAR 2 — LUNAR MONTH 1

🌑 **New Moon**

April 6, 2027

Because the covenant day begins at sundown:
